Judy Bartlett  
Director / Registered Nurse (Masters Nsg. Clin. Leadership)

## OVERVIEW

Bowel management is to manage fecal incontinence or constipation. Bowel management does not cure fecal incontinence, but can greatly increase quality of life. With successful bowel management, a person may be more apt to establish independence in normal daily life. It is an essential part of a support/care workers role to understand the importance of bowel management, how to follow correct procedures and report accordingly.

## CONTENT

This workshop covers the following:

- Intestinal Tract System
- Common Problems and Diseases of the Bowel
- Enteral Nutrition
- Colostomy
- Following Correct Procedures
- Infection Control
- PPE
- Maintaining a Healthy Gastrointestinal System
- Bowel Charting
- Documentation

\*Workshops can be contextualised to suit your individual organisational needs

## WORKSHOP DELIVERY

This workshop is delivered in the classroom over 2 hour duration.

## COMPLETION

Upon successful completion of the workshop, participants will be able to confidently demonstrate knowledge of subject matter and will receive a Statement of Attendance for Professional Development within 10 business days.

## VALIDITY / REFRESHERS

Rapid Response First recommends refreshing your knowledge and skills annually.
